Professional solution for your security systems

Professional software for video monitoring centres

Record	Record Check	Record Period
On	Off	05-19-2009 17:20:36 - 05-22-2009 13:24:59
Off	Off	04-23-2009 08:53:49 - 05-18-2009 00:00:00
On	Good	05-19-2009 22:57:10 - 05-22-2009 15:24:39

RASplus

Windows 7
compatible

DVR remote configuration

Multi-screen
monitoring

Alarm function

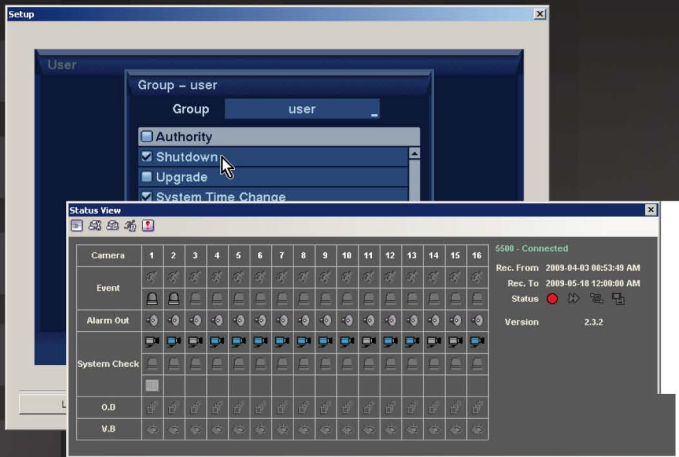

Device status control

RASplus

Windows 7 compatible

Functions of video monitoring system based on RASplus application and H Series & 5000 Series DVRs

SECURITY

System self-diagnostic - monitoring of system processes, recording, alarm input activations and reporting to control centre

S.M.A.R.T. HDD processes, HDD temperature and bad sectors monitoring with user notification function

User grants management - 14 access levels to system resources (e.g. serviceman, local operator, remote operator, administrator)

Panic recording of images from different cameras

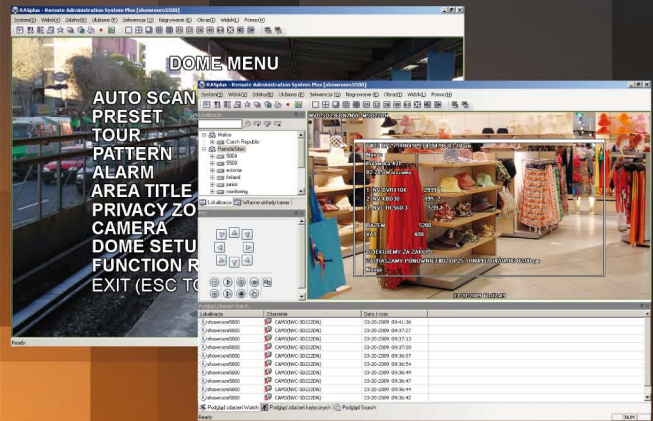

FLEXIBILITY

Defining of system reactions to recorded events depending on object requirements and reporting to control centre

Remote camera control and configuration

Registering text data from POS, ATM, access control systems etc., locally and via network

Resolution, quality and network transmission bandwidth configurable independently from recording parameters

EFFECTIVE OPERATION

Simultaneous connection with many locations (up to 64)

Simultaneous live monitoring and playback of recorded images

Full remote access to system configuration

Application adapted to multi-screen operation with the possibility of unlimited panel configurations

Intuitive work with graphical backgrounds (maps)

Data backup in the „mini-bank“ format (with built-in image player and password protection)

RASplus

Application for video monitoring centres allows simultaneous connection with all models within H Series and 5000 Series DVRs. Both the application and the devices have been improved for many years and have a rich history of adaptations in many expanded and technologically advanced systems with highest safety requirements.

The biggest systems that have been built contain a few hundreds of DVRs and a few control stations, ensuring continuous and effective control over monitored objects. It is RASplus application that together with recorder functions makes this solution so unique and effective.

The latest version of RASplus application (2.3.0) is fully compatible with Windows 7 system.

System concept

RASplus dedicated adaptations

BANK MONITORING

Effective control over many bank branches thanks to remote notification functions

Alarm events priority defined depending on object requirements

Simultaneous connection with many branches

Immediate access to DVR selected elements' status - alarm inputs and outputs, video signals, motion detection etc.

RESIDENTIAL AREA MONITORING

Easy system administration thanks to map function

Possibility of creating additional supervisory locations

User access limited to selected functions (14 levels) - e.g. a user can have access only to live monitoring

System operator's work verification

Remote access to DVR event history log

SHOPPING CENTRE MONITORING

Multi-screen operation - unlimited panel configurations and saving

Effective operator's work through automatic DVR connection with defined locations in case selected events occur

Automatic diagnosis of network connections and the status of all defined DVRs

PETROL STATION MONITORING

Full remote operation, no necessity of local administration

Firmware upgrade for groups of DVRs with no risk of losing settings and recorded data

Instructions displayed for operator in case of alarm events
